

## Sensor ETOR-55

### Moisture sensor for gutter

ETOR-55 measures the moisture in the gutter and is placed in the gutter or drainpipe on the sunny side of the building. The sensor contact area should be directed toward the direction melt water will float - that is, where there often will be melted snow or ice.

ETOR-55 is installed in combination with ETF-744/99, which measures the temperature drop.

### Technical Data

Measurement	Moisture
Installation	Gutter or drainpipe
IP Class	IP68
Temperature range (ambient)	-50/+70°C
Dimensions	H: 105 mm B: 30 mm D: 13 mm
Cable length	10 m May be extended up to 200 m
Resistance	10 Ω
