

PLUGIN PLUS

Frost protection for pipes (inside/outside)

PlugIn is an energy-efficient, self-regulating heating cable designed for frost protection of water pipes and drains. Its drinking water-approved outer sheath allows installation both inside drinking water pipes and externally, preventing freezing and damage caused by burst pipes.

The cable automatically adjusts its heat output to the surrounding temperature, ensuring effective frost protection with minimal energy consumption. A built-in thermostat switches the cable on when the temperature drops below 3 °C and off when it rises above 13 °C. For external installation on plastic pipes, aluminium tape is required for efficient heat distribution.

Supplied ready to use with a factory-fitted connection cable and plug, PlugIn allows easy installation without an electrician. Suitable for residential and industrial applications, it complies with IEC/EN 62395.

TECHNICAL DATA

Nominal Power	11 W/m @ 10 °C
Supply voltage	230 V
Cable dimensions	8 mm x 5 mm (+/- 0.5 mm)
Conductor insulation	Polyolefin
Conductor dimension	2 x 0.56 mm ²
Earthing	Aluminium Mylar tape with copper conductor
Heating cable, outer sheath	Polyolefin, special
Colour	Purple, RAL 4005
Cold cable	2 m with plug
Cold cable type	3G H05RN-F
Thermostat	Bi-metal (ON3° / OFF 13°)
Permissible cable temperature	Max. 65°C (85°C unpowered)
Min. bending radius	30 mm along the thin side
Warranty	5 years
Minimum installation temperature	-15 °C
Approval	CE
Standard	IEC 60800 / EN 62395
Tolerance power @ 10°C	-10 %...+20 %

APPLICATIONS

On pipe	✓
In pipe	✓
